Project Management Technology

VISIBILITY MANAGEMENT

Ranging from high-profile commercial to industrial and medical projects, a Texas leader in MEP (Mechanical, Electrical, and Plumbing) services is going to need an enterprise level project management tool to manage the sheer number of assignments Kilgore's contractors have been tasked with completing. This is where EPMA came into play. Our Project Management experts were tasked with doing what they do best, consulting the PMs, while implementing the tool, and keeping the stakeholders in the loop every step of the way.

THE KEY ISSUES

Every company grows, but expansions can turn a manageable workload into a chaotic mess of projects. For our friends at Kilgore, this was the case. Too many projects littering their desks, without a way to see all the necessary information in a single place. Insert EPMA's world class project managers.

Challenges that the organization faced:

- Lack of visibility into the status of projects and Project Managers
- Lack of PM Tool in place to manage projects
- Needed a way to track the effects of external delays to present their construction managers

OUR SOLUTIONS

With the vast number of documents and information spanning the different projects in play with this particular partnership, it was clear early on that the base 'out-of-the-box' version of Microsoft Project wasn't quite enough. So, to better suit their needs, EPMA decided to customize the look and feel of the tool. Here's everything we created:

Project Summary Page - We designed this page in a way that would pull information from a ton of different places and then display the data in one visually pleasing and presentable way.

Captured Submittals, RFI's, Change Requests, and Procurement Information in one place that was 'print ready'.

Developed multiple Power BI reports, pulling all the information from Microsoft Project and Sage.

A way to track risks and issues on the project, while including indicators on the lists, making the data far easier to consume.

VALUE ADDED

Our tailored solution provided the organization a number of new possibilities, insights, and ultimately a flexibility they didn't have before. They were able to swap the moment to moment problem solving for more strategic visibility across the board, connecting all of their projects in one tool.

CENTRALIZED LOCATION FOR ALL PROJECT DATA

- Provided Live via Power BI
- Identifies Issues and Delay Factors
- Visible on a Host of Platforms... Including Tablets!
